E-CART

PROJECT INTODUCTION:

Hello every one my name is Rakes and my partner is Mallikarjun, we both are trying to build a website related E-commerce.

Why we are choose it?

Now a days all thing converted into the digital, so in feature street shops also maintains the websites to improve their business and income. So we are choose it and learn how these types of website works and work on it to develop the websites like e-commerce. In feature we work on how to available these websites to street shops to grow their business with minimal cost of website maintains.

What user can do:

User can login or logout

User can check the availability of products without authentication

User can save and delete items to cart when login

What admin can do:

Admin can login or logout

Admin can add and delete and update product pages

Admin can add multiple products and its images and its prices in products pages

Technologies used:

Node.js

Express.js

EJS and Basic bootstrap

Future scope:

Payment integration

 Customer support chat integration

Gps integration

Integrate the feature which will give the first preference to nearest store products when user buying products which available in nearest store.

Integrate feature user can add products and delete and update products in the website.
